## An easy to use, minimal, text focused Jekyll theme

[Bear Blog](#) is "*a blogging platform where words matter most*".

This is a port of it's theme to Jekyll, with some tweaks. So you can use GitHub Pages to host your blog while getting the same awesome Bear Blog feels.

### Stop worrying about the style, focus on your writing.

- Looks great on *any* device
- Tiny, optimized, and awesome pages
- No trackers, ads, or scripts, *did I mention minimal already?*
- Auto light and dark themes
- Tag support, to filter blog pages
- Quick, *15 minute* setup
- Gallery view for your images
- Code highlighting

Have a look around, this website is already themed with **jekyllBear**. If you like it, head over to the GitHub [repository](#) for installation instructions.
